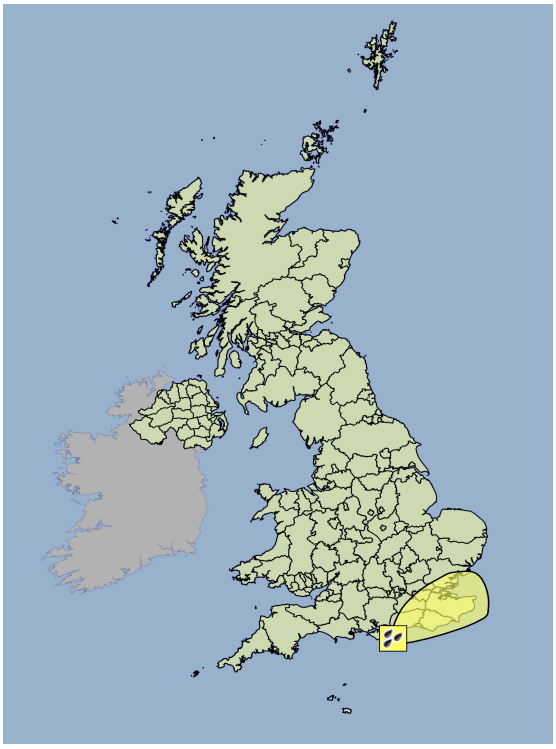
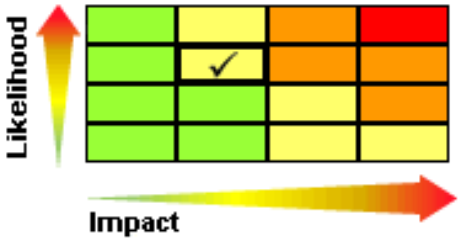
National Severe Weather Warning Service





Chief Forecasters Assessment
An occlusion originating over the North Atlantic will run into the UK on Sunday evening, bringing a band of rain to parts of the country. This has a great deal of convective input and so some locally heavy rain is likely but the location of the largest rainfall accumulations will remain uncertain.

This will bring some high rainfall rates with 5-10 mm possible in an hour and perhaps 30 mm through the event in some spots.

This warning will be updated on Sunday.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **22:00 on Sun, 10th Jan 2016** until **09:00 on Mon, 11th Jan 2016**

A band of heavy rain will run northeastwards across the southeast of England from late Sunday evening, clearing into the North Sea during Monday morning.

Whilst some areas will not see large totals, please be aware of the potential for localised disruption to travel.
